Description
    Once you have selected a language for a page (Editing => Properties or on page creation) other than "unknown" you can't select back "unknown".

    Sometimes it is better to keep a wiki page language as unknown and use the TR tags (plugins) to have a page adapting to different language. Therefor it is important to keep the option to have language=unknown pages.

    How to reproduce
    1. Go to the instance
    2. Login as admin
    3. Edit the homePage
    4. Set the properties=>languages to "unknown" save
    5. Check again it is back to English

    1. Go to the instance
    2. Login as admin
    3. Create a new page
    4. Keep the properties=>languages to "unknown" save
    5. Check again language = Unknow.

6. Change language to en and save
7. Try to change it back to "unknown" and save, it is not possible anymore

Also true in 18.x.

hman 01 Jul 20 10:06 GMT-0000

Confirmed, same in 18.x...

As per Tiki23 this is still the case.

You may ask why is it important to be able to set a page with unknown language.

They are case you don't want to assign a language to a page (all languages will see this page) and let the TR or the LANG plugins do there job.
