Description
The admin interface for modules is partially localized (German). The parts that are not cannot be manually localized with custom.php (even if the array_merge is added). But what is even more strange: Module location "Left" is translated correctly into "Links". But "Right" isn't. Now I wanted to see whether tra() or tr in curly braces are missing but I could not find the source of the texts displayed here. So I wanted to look for a word that would not give me a hundred hits when doing a recursive grep through all Tiki directories, so instead I searched for "Pagebottom".

But most peculiar, there is only one file that contains "Pagebottom", and that is custom.php! Yet this string clearly is displayed. Now where might the string "Pagebottom" come from?

Here is my search:

```
/media/XXXX/Home/WWW/XXX/agim/tiki-18.6 $ find . -type f -exec grep -l 'Pagebottom' {} \;
./lang/de/custom.php
```

??!

Look at the screenshot...
