- ● Offline Tiki: add a way to save/view content offline

Description

Needed to make this a new item, since it is not a feature request (like item 1413).

I cannot make PWA work.

With Tiki 21.1 neither in Firefox nor in Edge I am able to view the site offline.

Tiki setup:

- HTTPS enabled/mandatory
- REFURL is disabled

Browser:

- Firefox on Android: Add to Home screen ... not working
- Firefox on Win10: Simply browse url ... not working
- Edge on Win10: Url saved as App ... not working

Am I missing something??

Comments

David Bense 15 Jul 20 13:17 GMT-0000

Seems I killed the show2.tikiwiki-instance again?

Could it be I triggered something when I created an instance on item 1413 without being logged in?

<https://dev.tiki.org/item1413-Offline-Tiki-add-a-way-to-save-view-content-offline>.

The instance there did not install completely:

<http://edjusted-10169-1413.show2.tikiwiki.org/tiki-install.php>

After setting HTTPS to mandatory it seems the show2-page is not accessible anymore?

David Bense 30 Jul 20 08:12 GMT-0000

To demonstrate the 'bug' https is required. But on this instance it is not possible to login to https - the browser will report an error "Cannot connect"

David Bense 11 Aug 20 14:20 GMT-0000

<https://user-11990-7424.show2.tikiwiki.org/tiki-login.php>

It is not possible to access this page. Yet as I understood it, https is required for PWA to work.

Suggestions, anybody?

Xavier de Pedro 11 Aug 20 14:44 GMT-0000

If you need to demonstrate an issue using https, you can try demo.t.o, which seems to have https ready. For instance:

<https://demo.tiki.org/21x/>

However, since demo.t.o can be re-set to brand new tiki install every now and then, I suggest that

you record a screencast or similar once you have the issue reproduced there, plus the usual description of the steps to reproduce the issue.
