Related-to

- ● PluginDiagram not showing diagram if file stored in file gallery

Description

PluginDiagram works when saving in wiki page but fails when saving to file gallery

Solution

it seems to work as expected when attempting to reproduce in the show2.t.o instance.

Either there is some extra conflicting configuration in our work intranet where this issue happens every now and then, or this issue is fixed with latest version of 21.x and the composer package.

I experience the same bug with my Tiki instance:

- Tiki 22.x svn (Docker-Container)
- latest diagram package
