Description
In /lib/prefs/forum.php there is a forum pref, where the name of the pref directly contradicts it's description. In line 175 you'll find

```
'forum_inbound_mail_ignores_perms' => [ 'name' => tr('Allow inbound email posts from anyone'), 'description' => tr('Allow posts from non-users in forums using inbound posts from a specified email address.'), 'type' => 'flag', 'default' => 'n', ],
```

Mail-in allowed for "everyone", or only for "specified addresses"? Since no parameter that could specify such an address is asked and stored, I guess the name is correct, but the description isn't. Affects all languages...
