Description

Assigning tiki\_p\_download\_files to Anonymous via category permissions on a file gallery doesn't work any more (worked in 18.x).

1. Image is uploaded to file gallery "Images"
2. Anonymous doesn't have global perm tiki\_p\_download\_files
3. Category "Public"
  1. is set on file gallery "Images"
  2. has tiki\_p\_download\_files for Anonymous

Image should be downloadable for Anonymous, but isn't.

Confirmed on the show instance. Definitely something got broken there with the perms it seems. The object (file - smiley image) is in the File Gallery which has category Public assigned and the perms for the category are set to tiki\_p\_download for Anonymous but still the file does not inherit the permission and shows only to the logged in user?
