Description

I just entered the quiz function for translation.

I can create new quizzes, I can edit them, there are statistics.

But when creating a quiz, I am asked for a name and a description. Shouldn't I set some quiz questions, and answers to match? That is not being asked for when creating a quiz. So how is the success even calculated? When performing the so created quiz, you immediately get "Thank you for taking part".

Could it be that some functionality was lost here?

Thanks

hman

Oh, btw, there is no functionality to delete a quiz. You can edit it, but not get rid of it. This can never be okay...

Gary Cunningham-Lee 01 Aug 20 11:43 GMT-0000

I made a new quiz in my local Branch 18 Tiki installation to have a look at the problems you describe and to try to reproduce them. I agree that the interface/workflow is not clear and needs UI updating, and the documentation isn't up to date, but in my local test installation I was able to create a quiz, add questions and answers (options) and delete the quiz.

The questions for a given quiz are at `tiki-edit_quiz_questions.php?quizId=2` — the link to them is in the Actions popup displayed when I click the "Wrench" icon of the quiz where it is listed at `tiki-edit_quiz.php?quizId=2` in my local case. There is also a "Remove" item in the popup, which worked successfully here to delete the quiz.

I don't know what accounts for the differences in our experiences. Maybe you should create a show instance to give us a shared Tiki instance to examine.

hman 01 Aug 20 11:51 GMT-0000

The wrench carries only Edit and Statistics. No Delete... No other Actions.

I started a show instance, but this will take awhile. Meanwhile I will create a screenshot.

Screenshot attached.

Hm, descriptions of attachments cannot be edited once they got uploaded? Error message "No file attached. Was a file selected?"

hman 01 Aug 20 12:03 GMT-0000

Maybe the GUI is different depending on how the GUI was accessed. I've seen such differences before. I went into this by going through Control Panel | Features and the Settings besides the Enable checkbox of Quiz.

hman 01 Aug 20 12:19 GMT-0000

Found the culprit! The first visit to the quizzes brings you to tiki-list_quizzes.php. There you already have a wrench, but it lacks everything except Edit and Statistics. What you have to do to get the "real wrench" is to click on "Admin quizzes" and there the wrench magically contains options like Delete or Questions and Answers. While one could argue that Delete would be part of Admin, yes, but if Edit is there on list-quizzes, so should be Delete.

And what IMHO is still wrong is that when creating a quiz, you are not sent to the admin page where you can define questions and answers. You got to create the quiz first, then Q&A to add to the quiz, which isn't what I would call logical 😊

hman 01 Aug 20 12:37 GMT-0000

Okay, so now I could create a "real" (test) quiz and run it.

Bug: The default minimum score for passing a quiz is 0%. Having given all answers correctly, my test score is 100%, which is reported as "failed" ?!

Gary Cunningham-Lee 01 Aug 20 16:42 GMT-0000

According to <http://doc.tiki.org/Quiz-Admin> , there is a "Passing Percentage" option. Did you specify this option (a percentage, I guess) in your test?

hman 01 Aug 20 19:46 GMT-0000

The default value is 0%, which I did not change.
