Description
        While translating, I came across a feature that has text, description and help - but it seems to be
        without function?

        Prevent common passwords.

        "Prevent common passwords":
        "For improved security, prevent passwords in your password blacklist from being used."

        If you check the checkbox - nothing happens. I would have expected that some sort of blacklist
        would have to be entered? Or does it work differently?

        Thanks
        hman

I found the blacklist... It has a tab of it's own. Since there are so many tabs on tiki-admin.php?page=login I didn't see that. So sorry if I confused someone, I'll close this feature request. Or, rather than that: perhaps someone could add a hint to the feature to point at the blacklist... Thanks.
