Description
   Printing a structure with mpdf, some things are not printed properly:

    • Footer (or header) {PAGETITLE}

    A wiki page itself can be printed to a PDF, and {PAGETITLE} in the footer will be translated correctly to the footer. But once the same page is printed as part of a structure, {PAGETITLE} in the footer will only produce a void.

    • Plugin Last Modification

    A wiki page itself is printed to PDF correctly showing the value for {lastmod}. If the same page is printed as part of a structure, {lastmod} will not be translated.

    Working in wiki page alone:

Bug in structure:

On another note:

- Is it possible to add a pagebreak after each wiki page that is part of the structure when printed?
- Is it possible to get the have the page numbers shown in the TOC or some other way to refer to where in the 'book' this section is found?

David Bensel 24 Mar 21 06:07 GMT-0000

I would put in the time to solve this bug. But I would need somebody to guide me where to start. Any senior dev to spport me very much appreciated.
