UPDATE

I was able to drop the PHP version down to 7.3 without causing any issues on my other websites, and

now I am not getting any warning messages in my copy of Tiki-Wiki 21.2.

I am so excited now I can use the site for production!

Jonny Bradley 31 Aug 20 11:43 GMT-0000

Hi Walter

Glad you got it to work, yes 7.3 is mostly likely the best version of PHP for 21.x but i did backport a fix from trunk to remove those deprecation warnings in dd36d136 so the next release, 21.3 (i think) should be better with 7.4.

(p.s. alternatively you can tune your php.ini to not worry about deprecated or strict errors and it should all work fine too)

Walter Whitman 02 Sep 20 11:19 GMT-0000

Johnny Bradley,

That's great to hear! Thanks for letting me know.

Also, I knew about changing the setting in php.ini to quite the warnings and strict errors, but I like to know when there could be potential issues so I can fix them early on.

Marc Laporte 25 Jan 21 23:21 GMT-0000

One more fix:

<https://sourceforge.net/p/tikiwiki/code/77784>

David Onder 02 Feb 21 19:14 GMT-0000

I have 21.3 installed with PHP 7.4 and I am still getting deprecation errors in the following 2 files:

Deprecated: Array and string offset access syntax with curly braces is deprecated in /vendor_bundled/vendor/h5p/h5p-core/h5p.classes.php on line 2747

Deprecated: Array and string offset access syntax with curly braces is deprecated in /vendor_bundled/vendor/h5p/h5p-core/h5p-development.class.php on line 70

Jonny Bradley 03 Feb 21 11:48 GMT-0000

HI David

Deprecated errors are mainly warnings, so everything should still work ok, and you can either exclude those errors from the reporting or downgrade your php to 7.3.

I'm pretty sure all that is fixed in 22.x now (see this wish discussion) and now 21.3 is released i'll try and find time to copy all the fixes to 21.x so 21.4 should be better in this respect.
