Description
The class 'opaque calBox' from the calendar is broken. It is supposed to show the details of a calendar event, insted it shows raw Tiki syntax, in the case of a test event from admin on my site it is this that gets presented as text (!) to all users:

```
<div class=\'opaque calBox\' style=\"width:200px\"><a href=\"tiki-
calendar_edit_item.php?viewcalitemId=323\" title=\"Details\">Testevent #3<\/a><p
class=\"text-muted\"><strong>Erstellt von:admin<\/strong><\/p><br><\/div>
```

I could narrow this down, a little bit. The display is only broken when called from weekmode. If called from daymode it works! I already had weekmode under some sort of suspicion to be not quite correct, because weekmode doesn't highlight today's date, as all other modes do! But I couldn't find the culprit for either of the two in the source so far...

hman 11 Sep 20 10:54 GMT-0000

Further analysis show these different calls for the popup, but still I don't find the culprit. This is taken from the source as seen by the browser:

---

data-content="<div& class&=&'opaque& calBox&'& style&="width&:200px">& <a& href&="tiki-calendar_edit_item.php&?viewcalitemId&=324"& title&="Details">& Testevent& &#3& <&/a>& <p& class&="text-muted"><strong>Erstellt& von&:admin<&/strong><&/p>& & &
& <&/div>& " data-html="1" data-delay='{"show":"0","hide":"10"}'

(does work, dayview)

---

data-content="&lt&;div& class&=&\&#039&;opaque& calBox&\&#039&;& style&=&\&quot;width&:200px&\&quot;&&gt&;&lt&;a& href&=&\&quot;tiki-calendar_edit_item.php&?viewcalitemId&=324&\&quot;& title&=&\&quot;Details&\&quot;&&gt&;Testevent& &#3&lt&;&\&/a&gt&;&lt&;p& class&=&\&quot;text-muted&\&quot;&&gt&;&lt&;strong&gt&;Erstellt& von&:admin&lt&;&\&/strong&gt&;&lt&;&\&/p&gt&;&lt&;br&gt&;&lt&;&\&/div&gt&;" data-html="1" data-delay='{"show":"0","hide":"10"}'

(does not work, week view). It seems the latter is some kind of escaped version of the former, for reasons unknown. Look how the first ampersand '&' of the HTML expression of the less-than-character got itself escaped into HTML amp...

hman 04 Feb 21 16:56 GMT-0000

Calendar still broken in 18.8.

hman 02 Nov 21 22:09 GMT-0000

The calendar class 'opaque calBox' is still broken on 21.4...

Marc Laporte 03 Nov 21 16:43 GMT-0000

Please test Tiki24 from Daily Build as we made major changed after 21 (removal of old HTML interface to converge on FullCalendar UI)

hman 03 Nov 21 20:45 GMT-0000

Constant promises for a better future. Sorry. That doesn't convince me anymore.
First, lots of people tell me "Why do you stick to Tiki 18, use 21, it's so much better". Then people tell me the calendar in 21 would work smoothly. I test-upgrade to Tiki 21, and it breaks the layout. Unusable. I test the calendar of 21, and it fails. Now 24 shall be the saviour? Sorry, I don't have time for that.

hman 19 Aug 22 15:01 GMT-0000

Lost Tiki database connection
Sorry but there seems to be a problem connecting to the system's database.
