Description

Hi.

I noticed that there are no hreflang tags on tikiwiki pages.

I have 2 domains (.com and .ch). The content is absolutely the same (also the language). I need hreflang tags to avoid duplicate content.

Thank you

Have you tried the plugin meta tag? Search for it from the search function on the control panels' page. Also, you can try to add it as raw HTML before the HTML of pages, via the function in Look & Feel...
