Description
In order to make show*.t.o servers more sustainable (in terms of disk-space consumed by show*.t.o instances), a suggestion was fired in the TRM of September 2020]: once a bug report is closed, then "the system" could delete the tiki file tree linked to that bug report. Mysql db could be kept, but the many hundreds of Mb in current tiki versions from the file tree on disk could be removed to respect disk resources & availability for new show*.t.o instances.

Example: show2.t.o currently consumes something like 10 new Gb per month, due to the instances being created by users.
