Description
I installed a new Tiki22 and import a Tiki21 database to run it (plus theme files)
Refreshing cache is failling because of wrong permission on the cache files created

```
Cache file temp/cache/230dcdca34635c43b37f2b2358cba489 is not writable
```

Some of the new files are created by "root"

Solution
Not to use root to run setup.sh.

Workaround
setup.sh "f" fix this (temporary ?)

Did you run `setup.sh` or a `console.php` command as root? I can't see how Tiki could be doing this on it's own if it's run by either the web server or the "home" owner/user...

Bernard Sfez / Tiki Specialist 29 Sep 20 18:15 GMT-0000

I ran both as root.
setup.sh on the install and console.php after mysql injection of the previous db.

Did like this for years.
