Description

The toolbar editor calls for an icon for the smiley tool that does not exist (/img/smiles/icon_smile.png). This results in the text "smile" being displayed instead of the proper icon.

However, a /img/smiles/icon_smile.gif exists (GIF instead of PNG).

I did not find a particular PHP or .tpl that calls this icon as a PNG, so I suspect the entirety of tool icons are called by name and added extension .png. So instead of searching for the bug in the source code, and coding an exception just for the smiley icon, it would be much easier to simply create a copy of /img/smiles/icon_smile.gif in PNG format in /img/smiles directory to rectify this...
