### Description

Hello there,

I've been trying to use my main tiki instance as an InterTiki server, but so far it didn't work out despite the many attempts following the documentation thoroughly.

The response received at the client side is "XMLRPC Error: 5 - Didn't receive 200 OK from remote server. (HTTP/1.1 302 Found)".

I see that the server gets the request from the client but it seems to return an empty message. This is what the apache log looks like:

```
request authorized without authentication by access_checker_ex hook: /remote.php
Tue Oct 06 16:46:51.827942 2020 http:trace4 pid 27697 http_filters.c(953): client
2a05:1500:600:7:1c00:56ff:fe00:f4c:60310 Content-Length: 0
Tue Oct 06 16:46:51.827945 2020 http:trace4 pid 27697 http_filters.c(953): client
2a05:1500:600:7:1c00:56ff:fe00:f4c:60310 Connection: close
```

I've tried many different things to make it work, including removing .htaccess, disabling all auth and security modules in Apache, etc.

If you could give me a hint what the problem could be I'd appreciate it very much.

Best,  
Daniel

## Solution

Disable option "Protect all sessions with HTTPS" in the admin panel.

Hi Daniel

Sorry to get to this one too late, InterTiki is always a nightmare to set up in my experience, so i was putting off looking into this one! ?

Any idea why *Disable option "Protect all sessions with HTTPS"* fixes it for you? We have that enabled on tiki.org and that seems to work, i wonder why it worked it for you...

If we can add some documentation on InterTiki it might help others 🙏
