## Description
If you allow wiki pages to be edited by anonymous, and you embed a diagram in that wiki page, then anonymous users will be shown the link to "Edit diagram" ni that page.

However, if your site has the feature that forces to enter some antibot captcha for anonymous users, that antibot captcha is not shown to the tiki-editdiagram.php UI. Thefore, the anonymous user doesn't know that when they hit the "save" or "save and exit", those changes made are not saved at all, without getting any warning that they are silently lost.

A quick workaround/partial solution would be to at least hide the link to "Edit diagram" to anons if the feature to request some antibot captcha is enabled.
