Description

We have attempted to setup some tracker events in dev.t.o/tracker5 (the Bug Tracker), following he discussion in the TRM of September 2020, and the TAG meeting of October 2020 (today)

After setting up the appropriated scheduler task in dev.t.o, with this job:

```
cd /var/www/virtual/dev.tiki.org/html/; php tiki-batch_todo.php
```

And the cron job in the server behind dev.t.o (see https://tiki.org/Infrastructure-Team#Scheduler_on_dev.t.o), this is the error message shown in the scheduler UI in dev.t.o (https://dev.tiki.org/tiki-admin_schedulers.php?scheduler=1#contenttabs_admin_schedulers-3):

```
PHP Parse error: syntax error, unexpected '?' in /path/dev.tiki.org/html/lib/init/initlib.php on line 77
```

Workaround

Use php 7+ on the command line (see my *Null Coalescing Operator* comment below)

I hope it gets done via PluginListExecute which offers more flexibility and is well tested.

Jonny Bradley 28 Oct 20 17:21 GMT-0000

I just tried this on my local 22.x and got no output at all - aha, checking on line 77 of initlib.php i see a fancy new ?? operator which i think is php7.4 only, so i suspect the php that was running in the cron job was an old one, try replacing it with `php7.4` maybe?

(actually its a Null Coalescing Operator and is available in php 7.0+ only)
