Related-to

- ● Wiki page tracker field can't use results from mathematical calculation (formula using strings) due to parse order

Description

Using trackers, if I have a wiki page field getting the name from a mathematical calculation field, the wiki page name is not updated after the mathematical calculation field content changes.

Instead, the renaming works fine when the wiki page gets its name from a Text Field.

In my opinion, from the usability viewpoint this is quite critical.

A demo has been created.

Solution

Not trivial, just testing save and comment really...
