Description

On a multilingual Tiki 22 with "Prevent special characters in page names" enabled and "Wiki link format" set to relaxed. (multilingual is important factor here, it is because you have many languages with accent or non-latin characters)

This is working Tiki and Virtualmin interop

This is not working Tiki, Virtualmin intérop and more and m'ore and זה או זה

On dev "Wiki link format" is set to complete" so it is correctly displayed ?

Having a comma or a quote in the title of a page will break future usage of the page name as link. (wiki link)

The user has no warning about this and it gives a very bad user experience.

1. Warning on edit/rebname

When renaming or naming (edit) a page the editor should be warned: "you are about to save this

name for the page and it contains xxxx those character(s) may forbid..."

1. Warning on using wiki link syntax

It should be forbidden (or at least a warning) for an editor to create a wiki link in a page that contain such characters to prevent breakeage and bad user experience.
