

This will stay even after a refresh. Only if I click on the French language (language selector) even if it is already displayed as selected the tags will synchronise (all in French).

Now if from an external tools to check what my meta tags are I select the French version of the page (french name) It show me the right page in french, the right text in french but the meta tags, Keywords and Description are still in English.

Some things are not synchronised...

UPDATE: And this is messing with search engine and social network.

UPDATE: This happens when using SEFurl.

If you use `domain.com/tiki-index.php?page=nameofyourpagenotinenglish` it will work (site language will switch)
If you use `domain.com/nameofyourpagenotinenglish` the page will display but the site language won't change. I can't use SEFurl on show2 to demonstrate.

Solution

There is a slight chance that [189e20ba](#) might fix this for you, although I found the symptoms were slightly different... fingers crossed ;)

Good fix for this use case (let's hope no other niches), thank you Jonny !
