Description

It is not possible using the HTML plugin or the wiki syntax to have bootstrap modals as explained at : <https://getbootstrap.com/docs/4.0/components/modal/>

The page turn black/faded and the modal is displayed below the modal-backdrop (without the modal id).

Note: I have the feeling it was possible in the past (19, 20, 21). May be it is a recent change that has been merged into Tiki 21.

Not sure what you mean by "directly" but this should work in a wiki page (or here hopefully ;)

This div is collapsible, thanks.

```
{DIV(class="btn btn-primary btn-sm" data="toggle=collapse&target=#collapseExample"
aria="expanded=false&controls=collapseExample" role="button")}{click here}{DIV}
{DIV(bg="#ccc" class="collapse" id="collapseExample")}{DIV(class="card card-body")}{ This
div is collapsible, thanks. {DIV}{DIV}
```

(sorry, just read you said modals, not collapsibles... 1 sec)

Like this maybe?

new test tracker item

```
{DIV(class="click-modal btn btn-secondary")}{[tiki-tracker-
insert_item?trackerId=10&modal=1|new test tracker item]}{DIV}
```

Bernard Sfez / Tiki Specialist 08 Dec 20 10:29 GMT-0000

The modals for tracker item relied on Tiki code, I use and they work.

I can't make this <https://getbootstrap.com/docs/4.0/components/modal/#live-demo> work.

Just to open a dialog on click. I'm dam sure I used that but now it is under the faded background, no matter what I try with the z-index.

PS: by directly I mean grab the code from bootstrap doc and paste it between HTML wiki plugin tags or convert to wiki syntax.
