Description
The first save of a new article or forum reply post on tiki.org community server never works and deletes all the content of the form (resets) at the first try. User must go back in browser history (I use Brave browser, luckily the content is still there if you did not do a preview) and re-try the save action. 🙁

It happened many times to me recently. I can provide video of the action if needed to reproduce.

Not sure it is a server setup issue made by **@Oliver Hertel** or Tiki regression?

It might depend on "edit session" time. When you edit an article/post for longer than 5 min for example. I just replied one forum post quite quickly and it worked just fine this time...
