Related-to
- ● Creating calendar events creates doubled entries

Description
When you have backlinks to calendar events enabled, a wiki page that gets linked to from a calendar event that has a repetition rule, the wiki page's backlinks list ALL instances of the calendar event, which can be up to 99 !

At this point of course the real culprit is the inability of Calendar to actually have (and admin) repetition rules. What calendar does in reality is that it creates "n" copies of the event, which is a nuisance.

And due to a bug in calendar, entering an event with a repetition rule is always created twice, so you have to manually delete one after the creation.
