### Description

When I create an event, it shows up everywhere except the Calendar view (it's on the list view, and "upcoming events").

I tried unzipping tiki-pkg-fullcalendarscheduler-5.5.0.zip into public\_html/vendor\_custom/tiki-pkg-fullcalendarscheduler, but it didn't make a difference.

I also cannot find "Format to use for tracker field keys" in the Admin -> Search panel.

I was not able to reproduce this on show2. It seems to work fine there. The only difference I noticed, is that on my installation, no default calendar existed, and I had to create one before any calendar appeared.

So let's try to find out what is different in your set up.

Did you install from Git/SVN or FTP or an installer?

Can a dev do a screenshare with you?

Jonny Bradley 19 May 21 07:54 GMT-0000

Full Calendar is all JavaScript, are there any error messages in the JavaScript Console? (somewhere in "developer tools" depending on your browser)
