Make tracker fields rules to work with option label not only (hidden) option value

If I set a rule that check the content of a track field item link I can’t use the label of the option (displayed) and I need to indicate the value of the option (in the code).

IE:
<source value="5468">Paris</source>

Paris won’t work for the rules condition but "5468".

Yup, sorry B, it works on the value only so far.

Actually not so hard to add, would be some more conditions, like "label contains" and "label doesn't contain" ones...
