```

It is an important bug (edit may be lost) on a popular feature (wiki page) and require an easy fix (real limit of text + small warning".  
it should be fixed asap.

UPDATE:The value of the length accepted by the field in the database is 200 characters.

## Solution

While the suggested length for a meta-tag description is around 50-200 for SEO there are many factors that should influence in favour of a change of length.

First using the description as meta-tags is an option. Therefore this suggestion can't be the main factor for a decision. With social medias the description can be also used as body of a post, share, etc.

I suggest:

- We set the Length/Values for the Description field to 350~400 characters in the database.
- We had a physical limitation to the length of the value that can be submit for the field description (to avoid WSoD in case the user add more characters than allowed).
- We add a note about description : " You are allowed to insert 350 characters maximum."
- ...
