Description

Hi.

I think I found a bug about absolute and relative links. I have a page
"Tikitest:_:Links" and three links on it:

Tikitest:_:Links:_:Abc
Tikitest:_:Links
Tikitest

The first one gets interpreted as a relative link - relative to Tikitest, not to Tikitest:_:Links. This
means it leads to Tikitest:_:Tikitest:_:Links:_:Abc. The second one gets interpreted as an absolute
link and the "Tikitest" part gets rendered in an oval, with a grey background. This doesn't happen
with the first link. The third one gets interpreted as a absolute link as well.

The first one was dangling, when I created the page.

I'm using Tiki Version 21.4.

Bye,
Volker
