### Description

Slideshow system fails to work if there is no PluginSlideshow call in wiki page but just automatic link at the page bottom.

It seems as if some library (or something) is missing to allow passing slides forward, because the first slide is shown, and it works to highlight bullet points, but when the time to move to the 2nd slide comes, nothing happens and slideshow stays in the first.

If you go to list slides, and attempt to click at any from that list, it seems as if the slideshow systems wants to take you there, but it comes back to the first slide very quickly.

Reproduced in this show2.t.o instance attached to another bug report:

<http://xavi-9794-7332.show2.tikiwiki.org/tiki-index.php?page=Tiki%20Wiki%20CMS%20Groupware>  
u: admin  
p: 12345

Once you edit that page, and add a simple call to plugin slideshow inside (no params needed), and tiki caches cleared (just in case), then it works as expected:

```
{slideshow}
```

**@Xavier de Pedro**

It should be fixed when this MR gets merged in the upstream  
[https://gitlab.com/tikiwiki/tiki/-/merge\\_requests/987](https://gitlab.com/tikiwiki/tiki/-/merge_requests/987).

If ok, we can backport to earlier and versions.
