Description
I use ElasticSearch on a Tiki 22 and I have a weird error while browsing file gallery (in English).

Error
• Malformed search query: Parsing search query failed: "Field name does not exist in the current index. If this is a tracker field, the proper syntax is tracker_field_name."

Reproduced on local:

I could track the error feedback that is generated from "lib/core/Search/Elastic/OrderBuilder.php" line 81.
Something in the condition: if ((empty($mapping) || empty(array)$mapping && $prefs['search_error_missing_field'] === 'y') {

Initiate the feedback.

It happened also while I was updating a field (f_174) using the tracker interface inline. (in Hebrew)
The field is a dropdown field type.
The field exist and the change was saved.

{CODE()}
שגיאה
Malformed search query: Parsing search query failed: "Field f_174 does not exist in the current index. If this is a tracker field, the proper syntax is tracker_field_f_174."
{CODE}

Now it keep showing each time I do anything on tracker, even listing them all.

Still there on Tiki23:

Comments
Do you have a custom module with a list plugin in? This is usually a conflict between the sort_order used on filegals (or whatever) conflicting with a sort order in a custom module, in my experience.

This may help?
