Related-to

- ● Get the feature tiles panel (back) into the new admin dashboard ... please
- ● Admin Interface; Some Admin actions reload on a page outside the admin Control Panels
- ● Brand icon (bootstrap) should be part of the logo module (so it work with the new unified backend)
- ● New unified Admin Backend should work properly with RTL languages
- ● Unified Admin Panel: When going through all the menu items, user should not be pulled out of context
- ● Interactive translation top bar is not displayed with Bootstrap classic layout
- ✖ Unified Admin backend, bring back the footer
- ● Unified Admin: add a search icon in mobile mode

Description

On a Tiki23 if the layout option is set with : Classic bootstrap (Fixed top menu) the menu is lost when navigating on the admin pages.

The original website logo (brand icon) is changed for a Tiki icon making things more confusing.

Bottom module is also lost...

All bootstrap themes or themes bootstrap adaptation will suffer from this problem.
This block upgrading websites.

Solution

First, using any of our 3 Tiki layouts (look and feel) the header should look nice with the new UI Admin enabled. (Logo or Brand icon placement)

- Fixed in https://gitlab.com/tikiwiki/tiki/-/merge_requests/1565

Secondly, it should be easy to return to the Tiki website (actually it is confusing and the user need to guess)

Solutions (one or more may be used together)

- "Site Home Page" item in the left menu (distinct from the admin dashboard menu items)
- A "on/off" button in the header
- A Tiki logo (at the end of the header) (the logo/icon stay at the start of the header) = return to the website
 - I don't understand this suggestion??? How is this better from the current logo click = return to the website front-end?
- A home button with the browser title (text)
 - A home button (icon) is currently used for the dashboard/index page of the UAB so that would be confusing having two home icons I guess
- ...

I removed the "Upgrade Blocker" category to allow other security fixes to be released.

However we have an LTS (Tiki24) to be released in 4 month.

If this is not fixed and as some Tiki may be considered broken (a workaround is not a fix) after an upgrade it will be very hard to justify we the new UI Admin interface enable by default.

None the less this Is likely the first area a new admin will look at.
Therefor this is critical we have it fixed... or disabled by default. ?

Jonny Bradley 26 Nov 21 09:39 GMT-0000

Indeed, it's disappointing no one else seems available/willing to help with it, i've done all i can... (for this year)

Torsten Fabricius 04 Dec 21 12:23 GMT-0000

From my perspective, the switch to the new Admin UI is just not yet finished.

At some point there are admin tasks that "fall out of" the Admin UI at all and on the other had there are bots and pieces in the admin UI missing, whilst the over all appearance and usability is quite good already.

I think we are on the right track.

Jonny Bradley 19 Dec 21 17:07 GMT-0000

As suggests by **@Marc Laporte** at the RTM - add a new toggle button somewhere obvious on the admin

Also make all "admin" pages use the new UI...
