### Description

On Tiki23 at tiki-admin.php?page=articles I discovered a feature I didn't know exist (is it new and went under "my" radar ?)

I was about to think about an accordion to hide the BIG top search area that is eating the top part of the screen. ????

"Use new articles"

Use the new CustomSearch-based article lists rather than database information

The feature naming should be improved. ;-)

Look an awesome start but I found some issues

- Garbage in search field added depending on background color
- Author is not properly populated
- Article\_content (?) return not found

See the screenshot

Maybe it is a kind of work in progress ?

I see an interest for people to customise the template.

The path of the template OR some help to customise it mytheme/templates/articleCustomsearch should be added in the feature tooltip.
