Description

On Tiki23 I created a structure and added child page.

After a few page they start to behave awkward in there placement and relation.

There is no way to fix that. All the pages look on the same level on the admin structure interface while on the display side and if I check dump tree the structure is not the same;

This is the export tree:

```
Home Page Content HomePage_banner_en HomePage_banner_fr HomePage_banner_he
HomePage_classes_en HomePage_classes_fr HomePage_classes_he HomePage_values_en
HomePage_values_fr HomePage_values_he
```

This is the display page
