Description
   I recently upgraded a production tiki site from 21.x to 23.x in a new server, and when adding the missing composer packages in the new server, tiki became unusable after adding the google api client package:

   "google/apiclient ^2.2.2 Apache-2.0 wikiplugin_googlechart, wikiplugin_youtube"

   This added from dependency on php 8.0, apparently, and since tiki23 .x uses php 7.4, tiki became broken: WSOD with just one text message saying:

       "*Composer detected issues in your platform: Your Composer dependencies require a PHP version "= 8.0.0"*".

I had to enter the server through ssh and remove all contents from the vendor folder plus the composer files in the root folder.
Dead end for a new tiki site admin not knowing all these tricky emergency measures, probably?

Solution
The dependency on this for wikiplugin_youtube was incorrect i think, so i will remove that, and from the entry on packagist.org it looks to me like it depends on php 5 OR 7 or 8, like this:

> *requires:*
>
> *php:*
> *5.6|*
> *7.0|^8.0*

So we have removed the *blocker* status from this bug and advise people not to install it for now

For all versions at https://packages.tiki.org/ , we use
https://packages.tiki.org/packages/tiki-pkg-googleapiclient-v2.10.1.zip

And https://packagist.org/packages/google/apiclient#v2.10.1 requires php:

```
^5.6|^7.0|^8.0
```

There has been no big recent change. We will test all the non bundled packages for Composer 2 (Tiki23)

Jonny Bradley 22 Nov 21 14:52 GMT-0000

Hope that's ok **@Xavier de Pedro** 🌐

Xavier de Pedro 23 Nov 21 07:29 GMT-0000

thanks for the feedback & actions. untested fix (by me, lacking time sorry), but go ahead (I trust you)
