Description
: in plugin trackerlist and plugin trackerfilter (and maybe some others also) the filter fields is really ugly, mainly because the colon ":" is often displayed in a own line, ripping apart the field name and the filter field.

Well, just look at the screenshot, it's obvious.

Solution
: The colon should be displayed directly behind the filter/field name in the same line.

We understand issues for PluginTrackerfilter and it will be solved. But for PluginTrackerList, can you elaborate what is the issue? (There is no filter)

Thanks!

Sorry, that was a mistake by myself. I thought i had seen a similar problem in another Plugin, but i#m sure wrong with PluginTrackerList. If i stumble over a similar problem again, i will contribute it in the Bugtracker.

Thanks for solving this problem so fast.
