

- Username
- Date of acceptance (file creation or lasted)
- IP address used
- What document/object it is attached to
- ...

So later a Tiki admin or the owner of the Tiki can match document (version) and signature (user) and is able to prove "this" user with IP xx.xx.xx.xx signed this document on the xx/xx/xx.  
Information exist in log more or less (username, action, ip, date, etc) we need it to be stamped with the signature file.

It would be nice this "stamped" information can be displayed easily.

IE: This signature was used by "username/ip" for "object" (version?) on the "xx/xx/xx at xx:xx"

A mechanism to reuse or forbid reusing is something we can think of.

IE : One signature for page, item and account approval.

Counter-IE: It should not be possible to reuse a signature (twice or later or after a document is changed)

By extension the file and approval can be then attached to an object (not only I a wiki page plugin body) and can be used for tracker items (important for forms, shopping, registration, etc) calendars event or other feature, etc.
