

System error.

חזרה הודעת שגיאה זו

Incorrect string value: '\xD7' for column `bernardsfez_tiki23`.`tiki_objects`.`description` at row 1

The query was:

```
update `tiki_objects` set `description`=?,`name`=?,`href`=? where `objectId`=?
```

Values:

להתאים את סביבת עבודה בדיוק איך שאתה אוהב

tiki-read_article.php?articleId=66

226

The article is saved and visible (while something seems weird in the display)

I tried to check if they were invisible characters or some specific word or letter that cause the issue and I couldn't find.

If I take the same text and remove it from the Heading to paste it in the body, it is working as expected.

It couldn't be reproduced on the show instance so I checked my database setting.

In my (Virtualmin) configuration file (my.cnf) I added :

```
[client]
default-character-set=utf8mb4
```

```
[mysql]
default-character-set=utf8mb4
```

MariaDB System Variables look good:

```
character_set_client      utf8mb4
character_set_connection  utf8mb4
character_set_database    utf8mb4
character_set_filesystem  binary
character_set_results     utf8mb4
character_set_server      utf8mb4
character_set_system      utf8
character_sets_dir        /usr/share/mysql/charsets/
check_constraint_checks  ON
collation_connection      utf8mb4_general_ci
collation_database        utf8mb4_general_ci
collation_server          utf8mb4_general_ci
```
