Description

I tried to understand if it was possible and how to use the tablesorter with tracker filter plugin.

The trackerfilter modal is NOT user-friendly.

Too long list of things the user may not necessarily needed (menu child accordions would definitely help reducing the tremendous amount of information visible there)

The explanation have been copied and pasted as is from another place and hardly make sense.

Fields are not grouped together, naming is not helping (table sorter is hardly if ever found in the options and parameters list or help)... It is a mess and it took me 30mn of test to make a sample visible here :

https://doc.tiki.org/PluginTrackerFilter#Trackerfilter_with_table_sorter_setting_to_perform_calculations
