Description

We need a way of making Tiki known or not known to search engines before we do this. (like in wp)

We need the same, a "Search engine visibility" check box (enable or disable)

If enable the Tiki site can be crawled by search engine.

If disable nothing is to be crawled.

Should be enabled by default.

I often get next.tiki.org in Google search results despite our setup as explained at Pre-dogfood servers for Tiki 26 release process
