Description

In a Tiki 21.4 I get a WSOD (white screen of death / blank page) when I save a newly created page.

The page is created anyway and usable. The WSOD disappears when the browser is sent one page back or the site/page is loaded manually.

The bug only occurs while saving a newly created page for the first time.

After editing a previously existing wiki page, there is no WSOD after saving.

I did not yet test the behaviour for other versions, but I will add versions accordingly.

Tested in show instances:

Tiki 23.1vcs

<http://bsfez-11581-7912.show2.tikiwiki.org>

success - could not reproduce

Tiki 21.5vcs

<http://torsten-11143-7928.show2.tikiwiki.org>

success - could not reproduce
