Description
I have a tracker with 2306 items that individuals can filter through. If the search result is large enough their is an option on the bottom to select a page of results or they can chose a next or previous button. The initial result is fine, but if they select any option they are redirected to a page that lists the "path" of the url twice i.e., "https://example.com/tiki-index.php/tiki-index.php?page=TrackerName&tr_offset1=25" the same issue happens when I select from tracker directly i.e., "https://example.com/tiki-view_tracker.php /tiki-view_tracker.php?trackerId=6&offset=25"
In both instances if I remove the duplicate "path" I get the desired result. However, I cannot expect the user to take this action. I have this issue with tiki21.4 and tiki23.0
It seems to be an issue with parsing the url and putting it back together with the path twice. I have been coming through lib/tikilib.php to see if I can find the issue. I didn't have this issue with tiki18 which was prior to the change in 21 that included converting from absolute to relative links

I am using Nginx rather than apache so I explored various re-write rules in my Nginx
config file, but it seems to be in the link that is created by the code. Still exploring when I
have time. Anyone have a chance to look at this?
