Description

At <https://tiki.org/forum26> I see 2 search forms.

One at the top (look to me like the website general search)

One inside the forums "boundaries", above the forum title.

When I use the second Search form I redirected to the Tiki search page which doesn't allow me to search by forums, author, etc.

Basic tools a forum should have.

It should be possible to have dedicated tools (or at least how they look like) to search with Forums object fields.

We have everything needed in the unified index

parent_object_type

parent_object_id

lastpost_modification_date

object_typecontents

post_author

score

Etc...
