Description
In a new 24.x vcs master installation the tiki-admin_modules.php UI is broken.
The UI is kind of cut-off below the module zone tabs and there is no button to add new modules. The interface seems to have been reorganised, but not finalised yet.

When activating and deactivating (playing around) the tabs / no tabs buttons the button appears.
~~I will try to confirm with show.tiki.org~~ confirmed
There seems to be a conflict with two variants of the tab toggle (tab view / no tabs) and and a duplication of the admin module tabs. See attached screenshots.

I assume a template issue

Solution

Looks ok now, the show instance hadn't been updated since December but presumably something got fixed in the meantime...
