- ● Date of article in the sitemap article xml are wrong
- ✘ Google reject Tiki generated sitemap
- ● Scheduler failing to create sitemap (no commands defined in the "sitemap" namespace)

Description

After upgrading a Tiki23 to 2322c5e8 it solved some previous issues I had (see related ticket) but there is still a difference between submitting manually my sitemap generated from Tiki and using the console command (scheduler).

If I look at tiki-admin_sitemap.php I'm suggested to submit :

<https://www.bernardsfez.com/tiki-sitemap.php?file=sitemap-index.xml>

With this url, Google discover 42 URL.

But from what I see in the Google console search, seems the console command use a different URL,

<https://bernardsfez.com/storage/public/sitemap-index.xml>, which allow to discover 96 URL.

From a quick calculation the missing 54 URL are my Articles.

Solution

At tiki-admin_sitemap.php replace

<https://www.bernardsfez.com/tiki-sitemap.php?file=sitemap-index.xml>

with

<https://bernardsfez.com/storage/public/sitemap-index.xml>

Critical situation with this issue, I have 2 Tiki23 running the scheduler to create and submit Tiki sitemap and Google is removing pages (main domain <https://www.domain.com>) from indexing on errors. Meaning weeks of hard work are at stake as nobody knows when and how those pages will be ranked in the future. ☹

Frankly if I was a company investing in SEO and have such issues I would have left Tiki for another software...
