Description

On a Tiki23 I set login to use user tracker information and a corresponding tracker. User can register and they are assigned to group "Registered".

My use case is that when registering from a specific page the user should be assigned to a specific group. The group "Mygroup" with the option "User can assign himself or herself to the group" to y (enable)

For this I use a tracker plugin and set it like this : registration="y" chosenGroup="Mygroup" validateusers="y"

The user using this tracker plugin will be assigned to registered no matter what.

Check the instance.

In the html I see a hidden input to assign Registered to the variable chosenGroup

I tried to hard coded the value (`<input type="hidden" name="chosenGroup" value="Mygroup">`) at register-groupchoice.tpl to test but it didn't work.

Good fix, thanks Alvin !

Bernard Sfez / Tiki Specialist 11 Jan 22 14:46 GMT-0000

There is an issue with this merge.

The user is added in the "chosenGroup" but not in the registered group.

If I remove it from the "chosenGroup" the user has no group...

A user should always be in the registered group. ;-)
