### Description

If a package is missing the help/warning information displays a link to the external missing package repository.

It is important to note that we have already a similar mechanism when looking to a page (not the admin control panels) that display a message for admins (I hope for admins only ?)

At

[http://bsfez-11581-7999.show2.tikiwiki.org/tiki-admin.php?page=fgal&cookietab=6&highlight=feature\\_docs](http://bsfez-11581-7999.show2.tikiwiki.org/tiki-admin.php?page=fgal&cookietab=6&highlight=feature_docs), enable "Use PDF.js".

It will display an alert (red background):

The first link "Missing tiki package :" with a link to : [tiki-admin.php?page=packages](http://tiki-admin.php?page=packages)

Then "npm-asset/pdfjs-dist-viewer-min" with a link to  
: <https://asset-packagist.org/package/npm-asset/pdfjs-dist-viewer-min>

It should display:

"A Tiki package is missing: Install mpdf/mpdf"

"Install mpdf/mpdf" should be a link to : [tiki-admin.php?page=packages](http://tiki-admin.php?page=packages)

1. Tells the user of a problem
2. Explain what is the problem
3. Suggest the user a way to solve the issue
4. Give the user the direction/action to solve the issue

That's the way a missing package should handled, anywhere.

I added "anywhere" because it seems we have different behaviours.

IE: Go to <http://bsfez-11581-7999.show2.tikiwiki.org/tiki-admin.php?page=print>

For the "PDF from URL" dropdown, select mPDF. The "PDF Orientation" error will show  
"Missing tiki package: mpdf/mpdf" with parts with the same link. (not needed)

Screen Recording 2022 03 06 At 16.30.00

## Solution

When a package is missing the warning should say (everywhere):

"A Tiki package is missing: Install mpdf/mpdf" (change mpdf/mpdf with the relevant missing package name, tag)

"Install mpdf/mpdf" should be a link to : [tiki-admin.php?page=packages](http://tiki-admin.php?page=packages)
