(0)

Description
The category browser becomes messed up if you add many levels of subdirectories. To reproduce:
1. delete all categs
2. create top categ A
3. create top categ B
4. create 2nd level categ A:A1
5. create 2nd level categ A:A1:A2
The problem should be apparent now. Top categ B appears to be a child of categ A.
The problem worsens if you add another level, A:A1:A2:A3. The entire rest of the screen becomes hidden.

Solution
needs retesting in latest BRANCH-1-9

I tried in FireFox and IE and could not recreate this error.
