Description

On Tiki23 when using a since last visit module the category filter is not applied.
If I set a module since last visit to display only items from category 125 I will see many more object than expected.

For exemple, there are only 13 items (no child) for the category "communication_public" at :
<https://tiki.org/categories>
At : https://tiki.org/Bernard_tests I set a module I this:

```
{module module="since_last_visit_new" category="125"}
```

I see MUCH MORE than 13 objects, including object for whom it is not possible to categorise them (users?).

While the documentation doesn't mention a category parameter, a user can apply it the most natural way for users, see the video:

Screen Recording 2021 12 30 At 7.36.09

Seems that “Advanced” parameters are in fact parameters applied to the outer modules functionalities (module visibility and appearance) and not the specific module functionalities (what the module do)

Solution

Documentation need to be clarified
