### Related-to

- ● Tracker, Multilingual, Search: Item title is not consistent and is changed each time a user with a different language edit and save.

### Description

On a multilingual Tiki23 that was working fine and regularly updated and tested I have for a tracker item name 3 values (for each language):

en = Web App

fr = App Web

he = 'אפ װב

By default the title used by the unified index is the English one "Web App".

And the following filters in a plugin list was working fine no matter which language is selected by the user

```
{filter field=tracker_id content=16} {filter field=title exact="Web App"}
```

Since a few commits it is not working anymore and return a "no result found". (tested on Safari and Chrome)

The default title for an item used now is the French one and not the English one as previously. (no matter the language selected on the site)

## Workaround

I have my workaround using the tracker\_field permanent name used as title in the tracker field list.

```
{filter field=tracker_field_catalogproductsName_en exact="Web App"}
```

But having the title used by default changed for the French translation may have several impact (not only on tracker ?)
