Description

In Tiki we can filter a large quantity of data but our output is limited to screen.

So in some cases the users are displaying a lot of row only to copy them into a different editor or programs.

IE: Someone perform a search, select annually lines with the mouse, copy and paste into Excel.

We discussed during the January 2022 TRM of an idea of an option to export the results of a customSearch into a CSV file or a PDF or to print it (without the pagination of course). We have something similar for the plugin List table output :

https://doc.tiki.org/PluginList-output-control-block#Download_CSV_of_Table_Results

We need this for the customSearch plugin and eventually "outside" the table template.
